User interface The AutoCAD user interface consists of two parts: the drawing area and the status bar. The drawing area displays the workspace and active drawing objects. The status bar displays information about the AutoCAD application, including the current status of the running process. The commands can be accessed from the menu bar or the toolbar. Commands The following list includes the commands available in the latest AutoCAD release. A command is typically found in the menu or the pull-down menu on the toolbar. If there are multiple choices for the menu item or pull-down menu, each of those choices will be represented by an icon on the toolbar and the corresponding pull-down menu. The following table shows the base-level commands available in AutoCAD: Functionality specific to the following software releases are not listed here: Autodesk 2015, Autodesk 2016, Autodesk 2017. Update/reposition commands AutoCAD 2010 introduced a command to update the dimensions and position of a feature. This allows dimensions to be reoriented along the axis of the feature. This feature is limited to 2D drawing objects and cannot be applied to 3D objects. The command also supports the ability to reorient or reposition an outline. When an object is in edit mode, the Update/reposition command can be used to update the position of the feature. When editing an object and in an orientation that the command is not available, the user will be prompted to change the orientation before it can be applied. If an orientation is changed, the Update/reposition command will reposition the feature. If the command is applied after the feature has been moved, the command will attempt to automatically recreate the feature and reposition the feature based on the new dimension. AutoCAD has the ability to reposition or snap objects to a surface. A feature, line or point is selected and the command Update/Position will be used to snap the feature to the surface. If the feature is not visible, the user is prompted to change the surface color or select the feature. Positioning tools A feature on a drawing is typically repositioned using the tools under the Edit tab. The following features are available for positioning: Vector text Polyline Polyline, circle, ellipse, spline and arc Dimension line Arc 3D Polyline 2D rectangle 3D rectangle 3D closed polyline Solid topology Object a1d647c40b
