NoVirusThanks YouTube Video Downloader Screenshots:Q: Why does my Arduino-Zero only output 2.2V? I'm testing out the Arduino Zero and the ATmega32U4 as the processor. I'm using the Arudino IDE and the ATMega32U4. I'm trying to make a power monitor but I'm not able to get any reading from my power meter, which is a 12VAC. I'm using a Multimeter and a 12VAC to 5VDC power supply. I've confirmed that both of these supplies have 12VAC. I've done a little searching and have come across a lot of questions about this subject. I'm working off of this post, however it does not explain why I'm having a problem. When I make my test code and probe the board the voltage I'm getting is less than 2.2V. Here's my code:
