DAPlayer is a free and open source media player based on the Qt4 framework, which means you can use the application on Linux, Mac OS X and Windows. The software is very similar to other well-known media players, such as MPlayer or VLC. It offers you a single window interface which can display any kind of video or audio files you want. You can quickly navigate within the media by using the arrow keys on the keyboard. The tree view displays the contents of the folder you have selected in the file browser, while the "drag and drop" method shows up when you want to import a new file. You can also preview the media clips by using the "fast forward" and "fast rewind" functions. The program has a basic set of playback controls, including a slider, a volume controller, a switch for pausing and resuming, a reset button and a full-screen button. Other features include audio settings, a playlist for displaying and playing multiple files, the possibility to adjust the aspect ratio, flip the picture, adjust the color, zoom in/out and change the angle, a search engine for quickly finding media clips, a built-in equalizer, and the option to switch to a different theme for the interface. DAPlayer Settings: To start playing a media file, you must open the Settings dialog by pressing the "gear" symbol in the bottom right corner of the window. The Settings window includes a tabbed interface which can be used to configure important settings of the program. Here you can find the following options: The Appearance tab provides you with the ability to customize the settings for the appearance of the media player window. In this way you can change the default font, text size, color, window frame, and so on. For example, you can adjust the frame color, background color, and font, and specify the keyboard shortcut for restarting the application. You can also change the lock screen theme to "light", "dark", "custom", and "flat". The Audio tab contains settings for audio playback. You can configure the audio input device, output device, and audio settings. For example, you can choose your microphone or set the default audio settings.
