A: You need to download the file and run it. Open your Downloads folder from the File-Browser Download and save the file Double-Click the.exe Click Open Animal House Confirmed? Update Funnies, do you think what was really going on last week at last Friday's Animal House screening was really that the cast and crew were deciding to film an Animal House sequel instead of starting on Gorillas? Sure, it's old news that the cast has been meeting to discuss their future and maybe even meet up again, but maybe they've decided to maybe maybe make another movie, and if so, then we'll be watching! But for now, let's count down the days to July 6 when we get to see the movie I'm sure director John Landis will make for the next decade:1. Field of the Invention The present invention relates to a light scanning unit and image forming apparatus using the same and, more specifically, to a light scanning unit,

which can be used in a laser beam printer, digital copier, optical writing apparatus using heat or light or the like, or a laser beam printer using the light scanning unit, and an image forming apparatus using the light scanning unit. 2. Description of the Related Art A light scanning unit in a laser beam printer or the like scans a laser beam on the surface of a photosensitive drum for a given period, thereby forming a latent electrostatic image on the surface of the photosensitive drum. The photosensitive drum is then rotated to transfer the latent electrostatic image on the surface thereof onto a recording medium as an image. Here, the light scanning unit scans the laser beam on the surface of the photosensitive drum while moving a laser beam scanner in the main scanning direction. The recent trend in laser beam printers or the like is toward multi-printing. That is, multiple images are successively or simultaneously printed on a recording medium. To make multiple printing possible, a method of emitting multiple laser beams at the same time, a method of moving a photosensitive drum in parallel, or a method of dividing the photosensitive drum into multiple sections and printing on each section may be used. However, since multiple laser beams at the same time are emitted from one light scanning unit, the light amount of each laser beam has to be controlled in consideration of a fluctuation of output from the laser diode (LD) or
