ave;new feat.Sakura Saori - 2nd Album - Tearful (flac).1. Field of the Invention The present invention relates to an output device for an image forming apparatus such as a laser printer, a facsimile device and the like, and more particularly to a fixing device which heats and fixes an image on a recording medium such as a paper sheet. 2. Description of the Related Art An image forming apparatus using an electrophotographic method has a fixing device which fixes a toner image formed on a paper sheet as a recording medium. The fixing device includes a heat roller which heats a paper sheet conveyed through a nip portion with it to generate heat, and a pressing member which presses and holds the paper sheet with it. Such a fixing device has the advantage that it can heat the paper sheet quickly, and can fix a toner image on a paper sheet having a relatively large size at a short time. However, the surface of a heat roller is heat-resistant synthetic resin. Therefore, the surface of the heat roller is prevented from being overly heated with a paper sheet having a relatively large thickness. As a result, the surface of the heat roller is heated until only the desired temperature is reached in the case of a paper sheet having a relatively large thickness. As a result, because the glossiness of a toner image formed on the recording medium cannot be raised, it is difficult to obtain a print image having high glossiness. Specifically, in the case of the color fixing device having four color toner images, glossiness of a color image region is low, as the heating capacity of the fixing device is small. In the case of the monochromatic image, on the other hand, glossiness of the monochromatic image portion is also low. Moreover, in the case of the color image, because the glossiness of a toner image is low, the color image tends to have a foggy high glossiness portion, and the color image tends to have high glossiness and low uniformity of glossiness. In addition, as the temperature of the surface of the heat roller decreases, the glossiness becomes lower. In order to solve this problem, it is conceivable to enlarge the heat capacity of the heat roller so that the entire heat roller can heat the recording medium to a desired fixing temperature. However,
